FOR IMMEDIATE RELEASE

Boarding Cars Are Not a Thing of the Past

Take a virtual tour to find out why at booth 1109 during Railway Interchange

TULSA, Okla., September 20, 2019 – Industrial Structures will be showcasing its next generation maintenance-of-way (MOW) boarding cars (also known by the industry as “camp cars”) at booth 1109 at Railway Interchange 2019, being held at the Minneapolis Convention Center, Sept. 22-24, 2019.

Industrial Structures has been manufacturing maintenance-of-way boarding cars and other custom railcars and related structures for the rail industry since 1987.

“With 9,000 rail industry professionals in one place, and specifically those involved in MOW activities, Railway Interchange provides an opportunity for us to show the industry boarding cars are not a thing of the past,” says Industrial Structures president Jeff Simpson. “Don’t be misled by our longstanding history of manufacturing boarding cars. We are designing modern-day, next-gen boarding cars that meet MOW crews needs while providing them with a space that is like home away from home. Amenities like lodging and restaurants are not always easily accessible, and Industrial Structures’ boarding cars allow MOW crews to maximize their limited track time by keeping them closer to the job site reducing travel time back and forth each day.”

For more information about Industrial Structures and our rail product line, as well as virtual tours, visit Simpson and the team at booth 1109.

MOW boarding cars ready for shipment on the Industrial Structures spur.
